WARNINGS

The characteristics of the products contained in this catalogue are not binding for Cabur and can be changed, without prior notice, due to production requirements or to improve the products. Hence, please contact our technical-commercial network for any necessary confirmations or updates. You can find additional information about this and other Cabur products at our website www.cabur.eu

The Company

Founded in Italy in 1952, Cabur quickly conquered the role of leader amongst the national manufacturers of terminal blocks for electrical panels, always paying particular attention to the needs of installers and to cutting-edge technological solutions.

Today the company develops and manufactures a wide range of products for the electrotechnical and electronic industry which are renowned for their reliability even in extreme conditions of use.

The current production is the result of the many years of experience gained by Cabur as a partner of the main national bodies and companies, perfected through actions and collaborations abroad and includes:

- Connections for electrical panels
- Automation and control solutions
- Industrial marking systems
- Solutions for energy transition

The wide and diversified offer guarantees a level of flexibility and unique ability to find solutions tailored to specific needs, which enables us to respond to the most varied and complex installation needs.

Always oriented towards the improvement of its products, in recent years Cabur has responded to the Industry 4.0 project with the expansion of production facilities and important product innovations.

In pursuing a corporate culture based on Total Quality, Cabur has adopted the main European directives of the reference market and collaborates with the most prestigious national and foreign Institutes and Laboratories.

Its products are the result of qualitative choices of particular relevance in the field of raw materials used that, in addition to providing an ample guarantee of functionality and reliability over time, also work in full compliance with all the Norms, Regulations, Laws and applicable requirements, binding and self-adopted, with full satisfaction of all compliance obligations.

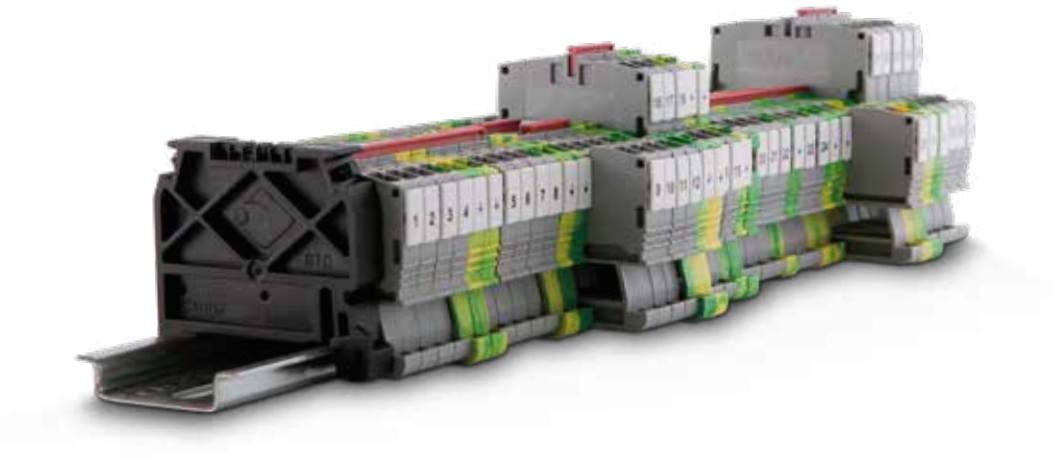
Spring-Clamp Terminal Blocks with Push-In Technology

Cabur EFC:
Easy Fast Connection

SPRING CLAMP TERMINAL BLOCKS WITH PUSH-IN TECHNOLOGY



IMQ 18 ATEX 007U I M2 Ex eb I Mb II 2 G Ex eb IIC Gb	IECEx IMQ 18.0002U Ex eb I Mb Ex eb IIC Gb

The new line of EFC products with Push-in connection technology offers a fast, reliable and efficient wiring of all cable types.

REDUCTION OF INSTALLATION TIME, INCREASED PERFORMANCE

The Push-in technology allows cables and hoses to be wired with or without wire clips. Cables are directly inserted in the terminal, with no tooling required to open the clamp spring: just pressing the wire is sufficient to provide a safe and durable electrical connection.

DIRECT PLUG-IN

Connection is so simple, precise and accurate that a switchboard can be wired with a single hand, without impacting performance. This also improves ergonomics. To connect flexible cables without a wire clip, just push the coloured button to open the spring clip and insert the properly stripped cable.

WIRE RELEASE BUTTONS: SPEED, SIMPLICITY AND SAFETY

To remove the wire from the terminal, just press the release button with any tool to open the spring. Release buttons, highlighted by different colours, prevent operators from making mistakes or coming into contact with potentially live parts, even in settings with a high concentration of links.

Speed

The Push-in technology helps reducing wiring times up to 75%.

Safety

An isolated button, identified with a different colour, protects the operator from indirect electrical contacts.

Quality

Having passed all the ATEX Directives, UL and EN60947-7 standards tests, these devices are suitable for any use and environment.

Simplicity

The stainless-steel spring designed by Cabur ensures optimal connection and prevents accidental removal.

Innovation

A compact and highly-visible design optimizes space in automation and control boards.

Efficiency

At last, one single hand is enough to wire an EFC series clamp, for a smoother workflow.

EFC.1 SERIES

SPRING CLAMP TERMINAL BLOCKS WITH PUSH-IN TECHNOLOGY

- Reduced wiring time
- Wire release button
- Reduced width

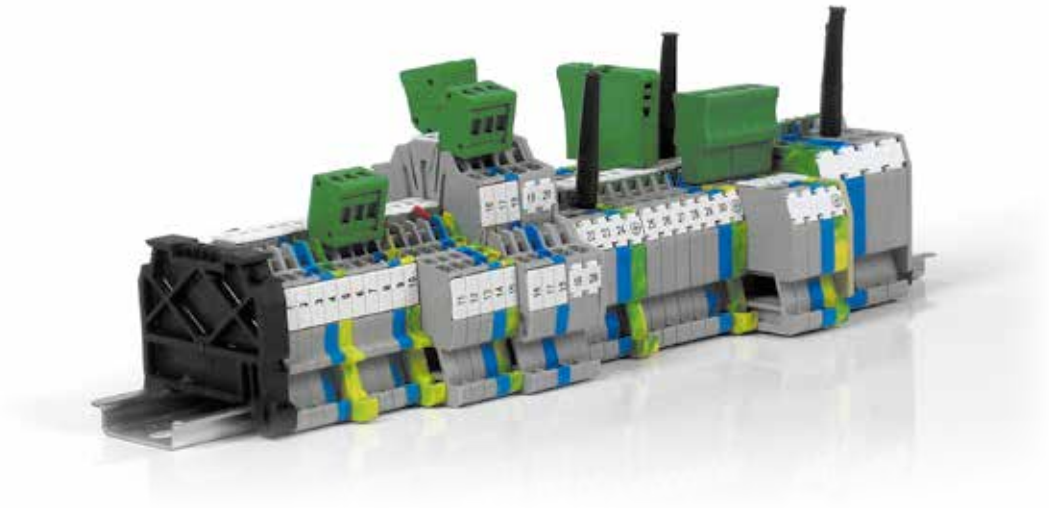
Spring-Clamp Terminal Blocks

SPRING CLAMP TERMINAL BLOCKS



INERIS 16 ATEX 9002 UI I M2 Ex e I Mb II 2 G Ex E IIC Gb	IECEx INE 16.0032U Ex e I Mb Ex e IIC Gb

For the creation of high harness volumes, for conductors from 0.2 to 25 mm2 and reduced current intensity values, CABUR proposes its range of spring-clamp terminal blocks.
To protect the clamping system, the insulating body includes a stopper which prevents the spring from going beyond the threshold of its elastic field, if is activated by inexpert hands.
Adequate sizing of the wire introduction chamber, responding to the requirements of the IEC 60947-1 Standard, guarantees insertion of any type of conductor of the nominal size, also butted with a terminal.
The connection that results from this, in relation to the technology adopted, has the maximum reliability and safety thanks to the quality of the materials used and to the particular conformation of the components needed for the purpose, avoiding damage to the strands of the conductors in the presence of unprepared flexible wires.
The wire entry is perpendicular to the installation surface determining a further reduction of times and costs of the wiring operations above all where the spaces are particularly limited.
To connect together several contiguous elements, a practical and safe bridging system is available.

Terminal blocks with rated cross-sections of between 1.5 and 16 mm2 have the possibility of being connected together in the most disparate ways thanks to our exclusive "Easy Bridge" rapid connection system (**PTC**), which combines efficiency, rapidity and flexibility providing at the same time a exceptional economic result; these characteristics together with the resulting **IPXXB intrinsic installation without the aid of further insulation protections** (of wires, terminal blocks and parallel connections), guarantees better connectivity than that offered by the competitors.

CNU/8

SHZ

MARKING SYSTEMS

In our marking system the same multiple numbering strip (**SHZ**) can be inserted on the sides of the terminal block or in the specific seats present in the upper part of the terminal block itself.

This means easy identification of each terminal block from every viewing angle within the electrical panel. The numbering can be done also with the single standard-type **CNU/8** tags.

SPRING CLAMP TERMINAL BLOCKS

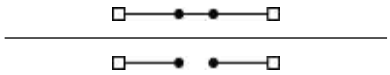
- connectable with the terminal blocks: HMM.2/GR, HMM.2/1+2/GR, HMM.2/2+2/GR, HMS.2/GR, HMFA.2/GR, HMM.4/GR, HMM.4/1+2/GR, HMM.4/2+2/GR, HMM.6/GR

Terminal assembly with double feeding distribution

(1) value referred to the terminal and not to the potential distributor
(2) See chapter accessories for more details
(3) The number of poles to be used shall be equal to the number of terminal blocks to be connected, including the distribution terminal block +1 to allow the connection to the distribution terminal block the second pin of the PTC jumper shall be trimmed off.

SINGLE POWER SUPPLY VERSION		**CODE**	**HM350GR**
		TYPE	**HMR.16/GR**
DOUBLE SUPPLY VERSION		**CODE**	**HM360GR**
		TYPE	**HMR.16/D/GR**



TECHNICAL CHARACTERISTICS

Function/type			feed-through
Rated cross-section		(mm²)	16
Connecting capacity	Flexible	(mm²)	1.5-25
	Rigid	(mm²)	1.5-25
	Max.flexible with ferrule - ferrule type	(mm²)	16–WP160/22
Electrical characteristics According to European standard IEC EN 60947-7-1	Max AC/DC Voltage	(V)	800
	Max current with rated cross-section	(A)	76 (1)
	Section	Caliber	A7
Electrical characteristics According to UL	Max AC/DC Voltage	(V)	600
	Max current with rated cross-section	(A)	30
	Section Min-Max	(AWG)	18-4
Rated impulse withstand voltage/pollution degree			12 KV / 3
Insulation stripping lenght		(mm)	18
Length		(mm)	80
Width		(mm)	12.8
Height mounted on TH35/7,5		(mm)	50
Height mounted on TH35/15		(mm)	57
Insulation material temperature index (EN 60216-1)		(°C)	130
Plastic material			polyamide UL94V-0

FUSE HOLDER SPRING CLAMP TERMINAL BLOCKS

- for "blade" fuse according to DIN 72581/3F – ISO 8820 and for Ø 5 x 20 mm fuses (all supplied separately)
- modular with component-holder cartridge CPF05, this one should be provided empty or already composed with electronic circuits (for more details see accessories chapter)

(1) See chapter accessories for more details

GREY VERSION			CODE	HF300GR
			TYPE	HMFA.2/GR
TECHNICAL CHARACTERISTICS				
Function/type				for blade fuse and component-holder cartridge
Rated cross-section			(mm²)	2.5
Connecting capacity	Flexible		(mm²)	0.2–4
	Rigid		(mm²)	0.2–4
	Max. flexible with ferrule - ferrule type		(mm²)	2.5–WP25/14
Electrical characteristics According to European standard IEC EN 60947-7-1	Max AC/DC Voltage		(V)	400
	Max current with rated cross-section		(A)	6.3
	Section		Caliber	A3
Electrical characteristics According to UL	Max AC/DC Voltage		(V)	-
	Max current with rated cross-section		(A)	-

Detail of PTC jumper with DFM/500 barriers, **CNU/8/51** numbering strips and VPC/VT lug protection covers

Detail with 5.08 mm female connectors inserted on the two levels and the lug protection covers raised

Female connectors, 90°–5.08 mm pitch and with a number of poles from 2 to 16, are available. The connector can be easily inserted until it reaches its blocking position, guaranteeing optimum connection onto the male contact. In this position the connector is hooked onto the insulating body with the holding tooth with which it is fitted.

Modular test plug

In electrical panels where the spaces are particularly limited and in any case when a high wiring density is required, Cabur proposes, also for the connection with spring technology, a series of mini terminal blocks, for conductors up to 4 mm2. The range comprises three versions, for panel mounting (fixing with screw or clip) and for mounting on 15 mm PR/2 guide, according to IEC 60715. The particular conformation of the insulating body of the three types of terminal blocks enables snap-in coupling of each of them, including between terminal blocks of different types, in order to ensure the maximum flexibility of use.

SUGGESTED COMPOSITION: for mounting terminal boards made up of **HPP.2/GR** terminal blocks a conformation of the terminal board of four **HP.2/GR** for every **HPP.2/GR** is recommended. If instead it is necessary to remove the terminal board thus made up from the guide, it is recommended to separate units made up of a **HPP.2/GR** and remove one at a time, with the aid of an opportune screwdriver (CCH/2,5-4), acting in the specific slots.

MINI SPRING-CLAMP TERMINAL BLOCKS

- panel mount by means of clips
- fixing hole Ø 3.5 mm
- panel thickness 0.6 – 1.2 mm

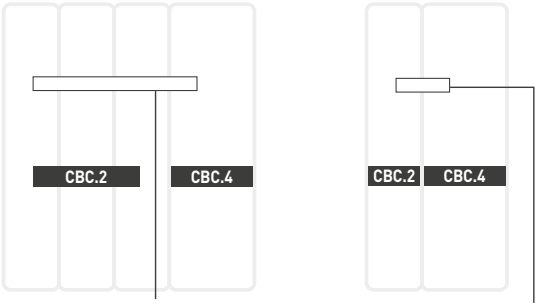
- Reduced overall dimensions
- Mounting on PR/3 rails according IEC 60715, TH/35 type
- Nominal voltage 1000 V
- Maximum continual operating temperature 130°C
- Double possibility of inserting multi-pole PTC cross connections, with no need for additional insulating covers, thanks to the patented "Easy Bridge" (PTC) system and to the new "Easy Bridge Plus" (PTP)
- Available in grey and blue; for other available colours refer to the single versions

Easy Bridge System

The Cross connection can be supplied in "standard" size, for 2-3-5-10 poles, or in 250-mm-long bars. The "Easy Bridge" connection system guarantees the widest possibility of transversal connection, including offset.

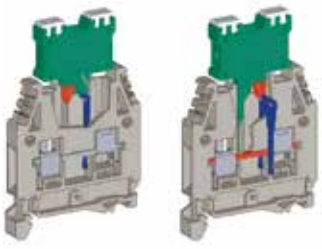


Multi-pole CBC.2 cross-connection

2 pole CBC.2 cross-connection

The cross connections can also be used to connect in parallel terminal blocks of the same section with the first of the following unit with a different section.

SDC
mounted



SDC/P
mounted

SDC - SDC/P
with conductors

DFM/900

DFM/800

After cutting the bar for the number of poles necessary, insert the cross connection in the special cavity of the terminal block.
At this point working with the tip of a screwdriver, push the cross connection up to the locking point. The cross connection will be completely isolated and intrinsically IPXXB protected.

After inserting the cross connection, the poles connected can be highlighted with the aid of the green insert, PTC/SP. This accessory is supplied in the standard length of 100 mm and can easily be sliced with the aid of a simple cutter.

To remove the cross connection it is sufficient to remove the PTC/SP insert, insert the tip of the screwdriver in the slot of the cross connection itself, lever it and pull it out.

- Behaviour in flame UL94V-0
- Universal mounting on PR/DIN and PR/3 rails in accordance with IEC 60715 standard
- Maximum continual operating temperature 130°C

The CBD Series comprises eight sizes, distinguished by:

- Very small space occupied
- Large connecting capacity
- Effective current capacity higher than established reference values
- Very low contact resistance of the connection
- Materials of excellent quality and, consequently, maximum reliability over time
- Great practicality of use

Cabur has always designated each product mainly with a Code, distinguished by a part in letters (generally 3) and a number, with an interposed dot.
This number defines the **rated cross-section** of the terminal in question; which as laid down in the reference Standard is "the figure, expressed in mm², corresponding to the section of the connectable conductor, declared by the Manufacturer, to which the thermal, mechanical and electrical parameters of the product are referred".

The field of use of the terminal block is however much wider and is defined by its connecting capacity, that is the range of sections of conductors, both rigid and flexible, minimum and maximum, that the terminal block is capable of connecting, in full observance of all the parameters laid down in the reference Standards.
In the table provided below, in fact, the "classic" code of each terminal block has been supplemented with the addition, after the existing number, which still indicates the nominal size, of a second numeric value, separated from the first by a /, which represents the size, in mm², of the maximum flexible conductor effectively connectable to the terminal block. In the event of use of rigid conductors (with single wire or corded) it is necessary to check also what is stated in the technical specifications of each product, under the item "connecting capacity", because in many cases the size of the maximum rigid conductor connectable is even larger.

Type	Ratedcross section	Flexible conductor (mm²)		Rigid conductor (mm²)		Gauge	Max. current

Type of connection:
It is with a screw, on both sides, indirect and self-locking. The clamping screws are accessible only with a special screwdriver and the particular shape of the head makes them impossible to lose. The screw clamping offers the best guarantees of a mechanical seal and of effective passage of the current and is suitable for the connection, with or without special preparation, of conductors of all sections. The tightening and loosening operations are extremely simple and are carried out with commonly-used tools, namely screwdrivers; it is however important, in any case, to use screwdrivers of the right characteristics and dimensions so as not to cause damage either to the screw itself or to the insulating base.

Conducting body:
of the sleeve type, **made entirely of copper-zinc alloy with nickel-plating treatment**; the characteristics of the material used and the manufacturing methods are such as to avoid the phenomenon of possible breakages, known as "seasoning cracks".

Tightening reliability:
opportune orthogonal ribs, at the bottom of the sleeve and on the lower surface of the clamping platelets, ensure in the various situations perfect electrical contact with the conductors and efficient mechanical locking. The grip on the conductor is made particularly effective by the elastic function performed by the clamping platelet; this, in particular, under the pressure of the screw, tends to bend, thus exercising a reaction applied to the head of the screw itself, which opposes unscrewing, even in the presence of dynamic stresses (vibrations).

Ease of insertion:
Inserting the conductor in the terminal block is facilitated:
- by the inclined invitation surfaces made on the insulating base
- by the rounded shape of the clamping platelet
- by the adequate size of the introduction hole with respect to the the diameter of the maximum insertable conductor. The conductor introduction depth is limited by a barrier fitted on the insulating base.

Other functions:
besides their main function of feed-through terminal blocks, the CBD terminal blocks are designed and made so as to be able to perform other functions. In fact, using a hole made in the upper part of the conducting body it is possible:
- to create a fixed or switchable transversal connection (cross connection) between two adjoining terminal blocks
- to create a multiple common bar connection between several adjoining terminal blocks
- to insert a socket for a test plug
- to insert a composable test plug for multiple signal testing.

Marking: all CBD terminal blocks offer the possibility of coding, on both sides, using the CNU/8, CNU/10 or CSC marking tags (this last system enables the composition of alphanumeric codes up to a maximum of four characters, six with the ADR/6 adapter).
Mounting: the polyamide terminal blocks of the CBD Series are made ready to be mounted indifferently on supporting rails of G32 or TH/35 type (IEC 60715 standard), with evident advantages and facilitations in procuring, managing and in general using the product.

IECEx CES 13.0012U
Ex eb I Mb
Ex eb IIC Gb

- Mounting for both PR/DIN and PR/3 rails which meet IEC 60715 norms, "G32" and TH/35 types
- Nominal voltage 1000 V
- Panel mount version
- Possibility of parallel cross connection
- Available in the /BB (bar-bar), /BC (bar-cable), /CC (cable-cable) versions
- Available in grey and beige
- Maximum continual operating temperature 130°C

Tightening reliability: the reliability of the connection (wire terminal or bar) is guaranteed by a screw and locking nut, with the interposition of a flat washer and an elastic washer, useful above all for countering the effects of the dynamic stresses. In the versions made ready for clamping of the conductors, without preparation. The reliability of the connection is ensured by the action and the particular wrapping shape of the clamping clip, the elastic reaction of which to the force pressing down on the conductor works as a lock under the head of the clamping screw, stopping it from loosening, even in the presence of vibrations. The conductor bar is also made with an appropriate concave seat so as to increase the grip of the conductors; in addition both the contact surface of the clamping clip and the concave part of the bar feature, along the entire length, crosswise channels that help to improve the connection characteristics, as regards both the mechanical retention of the conductors and the electrical contact, guaranteeing low contact resistances.

- Protection for the "bar" versions: this protection which in the normal installation conditions has a longitudinal position with respect to the axis of the terminal block, can easily be rotated, using a simple screwdriver (as prescribed by the safety standards). In this way it is possible to access the connection unit to be able to work on the wire terminals or on the bars;
- Protection for the "cable" versions: in this case the protection is fixed and snaps in: its development is orthogonal to the axis of the terminal block and it protects the collar, the clip and the clamping screw. It is worth noting the "shutter" device, fitted on the protection in axis to the terminal block and in line with the conductor introduction hole, which enables, with manual action in maximum conditions of safety, partial or total closing of the hole itself and consequently protection of the live parts, in the case of use of conductors with a much smaller section than the nominal one or cabling of the terminal block from only one side.

Mounting: for these power terminal blocks, owing to the notable dimensions and because they are subject to high stresses due to the forces generated by the conductors, a new hooking system has been studied and created. This enables it to be mounted indifferently on the various types of standard mounting rail (IEC 60715). The terminal block is unhooked simply using a screwdriver, inserted in the special slot provided in the hooking system (yellow part). If the mounting rail itself is installed on a flat wall, the dimensions of the GPM terminal blocks make it indispensable to use flat brackets to space the terminal board from the surface adequately. For each terminal block of the Series the version for direct fixing to a panel (/FIX) is also available.

Marking: the GPM terminal blocks enable identification from both sides which can be done with both the CNU/8 (2 elements) and the CSC (up to 5 elements) type marking tags: the two possibilities are not alternatives, but can be combined.

Cross-connection: on this Series of terminal blocks it is also possible to create a cross connection between 2 or 3 adjacent terminal blocks using opportune cross connections; to insert this accessory it is necessary to remove the insulating baffle pre-engraved on the side wall of the insulating body.

HIGH CURRENT TERMINAL BLOCKS

- panel mount version - M6 screws (recommended with screwdriver and washer slot)
- possibility of parallel cross connection

Protection: ACB terminal blocks can be protected against direct and/or accidental contacts by means of specific **PRT** covers of different sizes: Small, Medium or Large in transparent and self-extinguishing material. These covers, with a fixed length of 200 mm, correspond to the width of four terminal blocks side-by-side and inserted on **SPS** supports, also made of self-extinguishing material, which enable the protection of one of the two connections of the terminal blocks; the complete protection of the terminal board is obtained using two covers, overlappable.

PRT/P+SPS/1	PRT/P+SPS/3
for ACB.70/BB, ACB.120/BB, BCA.70 and BCA 120 terminal blocks	for ACB.185/BB, BCA.70 and BCA 120 terminal blocks

The **PRT/G** is to be used when the conductors come from the backboard, or in order to protect a connection point not yet connected.

HIGH CURRENT TERMINAL BLOCKS

- bar - bar terminal blocks

Due to the non-standardized thickness of the terminals,
for the use of the conductors of the smaller connectable sections,
it may be necessary to introduce a washer under the screw head.

Stud terminal blocks for the terminal wire or bar strain clamp with max. width 30 mm, to be mounted on PR/DIN mounting rail. It is advisable to use **DUS/1** or **DUS/3** barriers to guarantee the insulation distance between different phases.

If accident prevention cover of the terminal board becomes necessary, the insulation function would be performed by the **SPS/5** supports of the cover itself.

For the installation on limited longitudinal space where high density wiring is needed together with reliable insulation, special feed-through two/three level terminal blocks are available. The three level terminal blocks are suitable for circuits which are to be used and connected with specific equipment, as for example proximity sensors. In fact, through the combined use of TLS.2 and TLD.2 terminal blocks it is possible to connect in an optimal and economic manner both power supply conductors on input to the sensor, and those on output carrying the signal of the same. Particularly in the **TLS.2 terminal block**, the intermediate and lower levels can be used to feed the sensors in d.c.; the feeding is distributed on the adjoining elements of the terminal board by means of a special **LOCK** connection system.
The above mentioned conducting bodies have a fork, pointed towards the exterior of the terminal block, which connects to the homologous element of the adjoining terminal block.
The resulting contact is clamped with a screw, supplied already inserted in the conductor element.
The LOCK system, above described, allows the connection of positive and negative poles, without the use of any other parallel cross connection. At the upper, feed-through level, the conductor for the return signal of the sensor is connected; inserting PRP/5 coloured protections in the special channels guarantees against all possible contact of the live parts and enables immediate identification of the polarity (Red for +, Blue for).
TLD.2 terminal block is perfectly compatible with the **TLS.2** for the connection of proximity sensors, as it has the same electrical and mechanical characteristics. Two of six tightening units can be connected to the sensor feeding cables and distribute the power supply to the other sensors.
The cross-connection between the intermediate and lower levels of these terminal blocks to the contiguous ones of the TLS.2 can be performed by means of the two screws provided in the fork type conducting bodies of the TLS.2 – the first of the Series – free from whatever connection; between the TLD.2 and TLS.2 terminal blocks a TLD/PI intermediate end section must be interposed, to ensure electric insulation of the TLD.2 terminal block conducting parts, which otherwise would be uncovered.
TLD.2 terminal block can also be used for other connecting applications, in other types of circuits.

MPFA.4 – detail of the terminal blocks with numbering CNU/8 and CNU/8/51, "blade" fuse seen from the PTC/4 cross connection and seen from the PTC cross connection. The terminal block can be supplied already including a non-polarised LED warning circuit, to warn if the fuse breaks. Two versions are available, depending on the different power supply voltages.

DSFA.4 – detail of the terminal blocks with numbering CNU/8 and CNU/8/51, blade fuse and view of the PTC/4 cross connections on the upper level (upstream from the fuse) and on the lower level.
The terminal block can be supplied already including a non-polarized LED warning circuit, to warn if the fuse breaks.
Two versions are available, depending on the different power supply voltages.
DSFA.4/L12 code DA112 (complete with non-polarised 12 V LED circuit)
DSFA.4/L24 code DA124 (complete with non-polarised 24 V LED circuit)

FPC - FPL SERIES

FUSE HOLDER TERMINAL BLOCKS

- for Ø 6.3 x 32 mm fuses
- for Ø 6.3 x 32 mm fuses, with possibility of warning of any broken fuse through LED microcircuit (CIL/...)
- No end section required

(1) value reffered to the insulation characteristics of the terminal blocks

DISCONNECT TERMINAL BLOCKS FOR TEST AND MEASUREMENT CIRCUITS

WITH UL94V-0 POLYAMIDE INSULATING BODY

• Universal mounting for both PR/DIN and PR/3 rails which meet IEC 60715 norms, "G32" and TH/35 types

In SCB.6 type terminal block, the use of special cross-connections, formed by

SCB/6/PO/2
(between 2 adjoining terminal blocks)

or
SCB/6/PO/4
(between 4 adjoining terminal blocks)

and by the relevant
SCB/6/CPM
shunting screws

allow the simultaneous earth connection of the current transformers connected to the terminal blocks themselves, guaranteeing the correct operational sequence. In fact such cross connections, in opened position, avoid the translation on the slide links, already connected in an accident prevention position from the outside; they do not require the insertion of further partitions to separate them from other adjoining cross-connections or terminal blocks, due to the special shape of the insulating body of the terminal block itself.

SCB.6 type terminal blocks have also the possibility to house, upstream and downstream the disconnection, sockets for test plugs, suitable for the withdraw of signals.

In particular the shunts can take place:

- On **SCB/CPM** shunting screws of the short-circuit plates
- On **PSD/P** socket to be screwed directly into the conducting body of the terminal block, in order to perform the shunting function.

The slide-link is formed by two guides, held together by a screw inserted in a glass-shape collar, which allows the elastic blocking and the anti-loosening of the slide-link and is provided with a red protective colouring for the easy positioning of the screwdriver during the disconnection and the easy spotting of the slide-link itself.

DISCONNECT TERMINAL BLOCKS FOR TEST AND MEASUREMENT CIRCUITS

cabur

- configurations prepared /DD (with derivation sockets upstream and downstream of the slide link) - for voltammetric circuits
- configurations prepared /CD (with derivation sockets upstream and downstream of the slide link and sleeve for short circuit upstream of the slide link) - for amperometric circuits

(1) For the simple connection in parallel of two or more adjoining terminal blocks use the parallel skid, with the screw and sleeves, after removing the insulating wall with a simple cutter.
(2) Longitudinal and trasversal test switching terminal block. Configuration complete with test plug socket downstream and upstream the slide link, compliant with the ENEL LV 27/3 specifications.
(3) Longitudinal and trasversal test switching terminal block. Configuration complete with test plug socket upstream and a short circuit sleeve SCB/6/PO/2 or SCB/6/PO/4 type, supplied separately, downstream of the slide link, compliant with the ENEL LV 27/3 specifications.

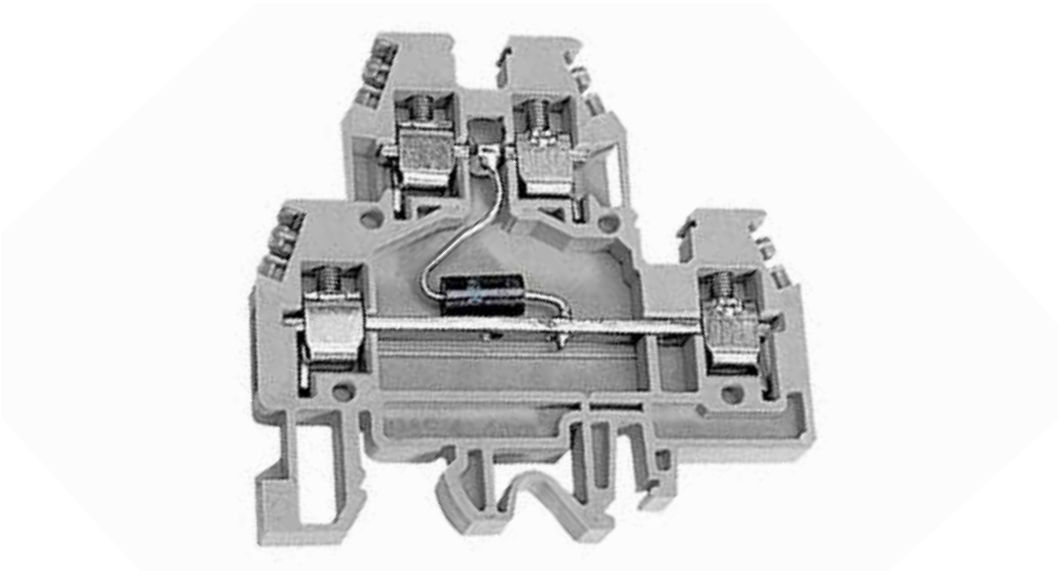
TERMINAL BLOCKS WITH ELECTRONIC COMPONENTS



- With cross-connection possibility
- Universal mounting onto both PR/DIN and PR/3 type rails - according to IEC 60715 standard
- Two and three level circuits with bidirectional suppressor diode
- Protection against overvoltage, transient, pulse jamming
- Class D protection according to standard DIN VDE 0675. 1989
- Overvoltage category <1.5 kV, I (DIN VDE 0110.1)
- Available in grey and beige

The **DAS.4...D** terminal blocks with suppressor diodes inserted as in **diagram 3**, limit voltage peaks due to surges, electrostatic discharges and switching of inductive loads, and enable the equipment to pass the tests on immunity to electromagnetic interferences defined by the EN 61000-4-2 (Electrostatic discharge), EN 61000-4-4 (Fast Transient/Burst) and EN 61000-4-5 (Surge Test) Standards. The suppressor diodes have an intervention time (<1 ns) much faster than the intervention time of varistors (approximately 25 ns) and a lower and more precise intervention voltage, but compared to these withstand lower discharge currents.

The great precision of the intervention voltage and the great speed, makes them suitable for protecting industrial PLC, DCS, PC I/O signal ports, against voltage interferences and discharge currents lower than 500A impulse 8/20µs. This type of interference is usually caused by the normal operation of the plants themselves, owing to the switching of strong inductive loads, dispersed currents, faults, etc...

The range of models available makes it possible to choose between nominal voltages suitable for protecting signals with standard voltages of 5Vdc, 12Vdc, 24Vdc and 60Vdc.
The **DAS.4...D** connected as in **diagram 4** is an effective protection against differential mode interferences for industrial PLC, DCS, PC inputs and outputs, signal conditioners and sensors, and also for stabilised direct current power supplies of electronic equipment in general.
The **DAS.4...D** does not have a signal wiring direction to be observed, as also the connection of the positive and negative polarities can be made either on the lower or the upper level.

Differential mode interference (diagram 5): these generate a great difference of potential between the two conductors of a signal (positive and negative of the twisted pair) or of a power supply, and as they are applied directly to the input/output circuits of the device, they always cause a fault in the same.

Common mode interference (diagram 6): these generate a great difference of potential between the two signal or power supply conductors and the reference earth. They are less destructive than differential mode interferences.

Caution: inserting surge protection devices with varistors, diodes and other components between the signal and/or power supply conductors and the protection earth reduces the insulation voltage approximately to the V breakdown value of the discharger used; to perform insulation tests on the equipment, disconnect the dischargers (IEC EN 60950 Standard).

Note for wiring: wiring of the power surge protection devices greatly influences their actual efficacy and we recommend following the instructions below:

- The protection device must be placed as close as possible to the equipment to be protected;
- The connection wires must be as short and straight as possible, interwoven with each other and with the largest possible cross section;
- The earth conductors between common mode dischargers and the equipotential busbar must be as short as possible and with the largest possible cross section and their path must not be parallel to other conductors. The earth of the protected equipment must be connected to the same earth of its discharger and from there to the general protection earthing.

Schema 3

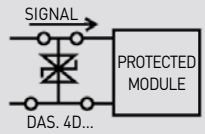


Diagram 4

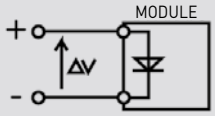

Diagram 5

Differential mode interference.
The potential difference is applied between positive and negative poles of the power supply signal.

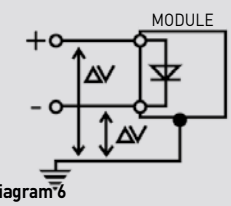

Diagram 6

Common mode interference.
The potential difference is applied between the poles of the signal/power supply unit and the earth.

The **DAS.4V...** terminal blocks with varistor inserted as in **diagram 1**, limit voltage peaks due to surges, indirect atmospheric discharges and switching of inductive loads, and enable the equipment to pass the tests on immunity to electromagnetic interferences defined by the EN 61000-4-2 (Electrostatic discharge), EN 61000-4-4 (Fast Transient/Burst) and EN 61000-4-5 (Surge Test) Standards.

Varistors have an intervention time (20-25 ns) much longer than the intervention time of suppressor diodes (<1 ns) and a higher intervention voltage, but compared to these withstand higher discharge currents. The high discharge current makes them suitable for use in the presence of strong transients, with currents of up to 4500 A impulse 8/20 s.
The range of models available makes it possible to choose between nominal voltages suitable for protecting both signals and power supplies with standard voltages of 24 V DC, 48 V DC, or for power supply voltages of 120 V AC and 230 V AC.

The **DAS.4V...** connected as in **diagram 2** is an effective protection against differential mode interferences for industrial PLC, DCS, PC inputs and outputs, signal conditioners and sensors, and also for power supplies of electronic equipment in general.

The **DAS.4V...** does not have a signal wiring direction to be observed, as also the connection of the positive and negative polarities can be made either on the lower or the upper level.

The **DAS.4V...** terminal blocks with varistor inserted as in **diagram 1**, limit voltage peaks due to surges, indirect atmospheric discharges and switching of inductive loads, and enable the equipment to pass the tests on immunity to electromagnetic interferences defined by the EN 61000-4-2 (Electrostatic discharge), EN 61000-4-4 (Fast Transient/Burst) and EN 61000-4-5 (Surge Test) Standards.

Varistors have an intervention time (20-25 ns) much longer than the intervention time of suppressor diodes (<1 ns) and a higher intervention voltage, but compared to these withstand higher discharge currents. The high discharge current makes them suitable for use in the presence of strong transients, with currents of up to 4500 A impulse 8/20 s.
The range of models available makes it possible to choose between nominal voltages suitable for protecting both signals and power supplies with standard voltages of 24 V DC, 48 V DC, or for power supply voltages of 120 V AC and 230 V AC.

The **DAS.4V...** connected as in **diagram 2** is an effective protection against differential mode interferences for industrial PLC, DCS, PC inputs and outputs, signal conditioners and sensors, and also for power supplies of electronic equipment in general.

The **DAS.4V...** does not have a signal wiring direction to be observed, as also the connection of the positive and negative polarities can be made either on the lower or the upper level.

Detail with PTC jumpers and barriers

Detail with 5.08 mm female connectors and lug protection covers in up position

5.08 mm pitch female connectors are available – 90°, with number of poles from 2 up to 16. The connector is easily inserted pressing it up to the stop position, guaranteeing optimal connection on the male contact. In this position the connector is hooked onto the insulating body with the holding tooth with which it is fitted.

VPC/PTF
Flange for the securing of female connectors provided with locking screws onto the terminal board

DF/VPC
reduced pitch end section for the separation of different groups

For even more secure fixing of the connector it is possible to use connectors specifically fitted with locking screws on the side. In this case it is necessary to place a VPC/PTF (code VP303) flange alongside, to the right and left of the block of VPC.2 terminal blocks. If the set thus made up proposes a flange with external connection stalks it is necessary to add a VPC/PT terminal plate, or to eliminate the stalks themselves using a cutter. For reasons of safety the connectors must be handled only in the absence of load. Use of the barrier DF/VPC (code DU02S), for physical and/or visual separation of blocks of terminal blocks, does not affect the possibility of creating parallel cross connections.
The terminal block can be supplied also in the version with a warning light (VPC/L024). In this case a collector bar (dimensions 7 x 1 x 250 mm), for the common return of a LED (red – 24V), must be inserted in the specific seat on the side of the insulating body of the group of terminal blocks side-by-side and connected via a power supply terminal block VPC.2 (Ex)i/D (code VP400). The power supply terminal block VPC.2 (Ex)i/D is a variant of the VPC.2(Ex)i terminal block equipped with a diode 1N4007. A transparent cover to protect the male shanks from accidental contacts is supplied as an accessory (VPC/VT code VP102) in a 10-pole stick, easily dividable to obtain the number of poles necessary. It snaps into the special seat provided on the insulating bar; the insertion point works as a fulcrum for the rotation of the protection from the closed position (position which is guaranteed by a stopper) to open (for inserting the connector). It is made of transparent material to ensure a view of both the connection type (closed pos.) and the LED, in open position and with the connector inserted.

TERMINAL BLOCKS WITH SPECIAL CONNECTIONS

- for female connectors pitch 5.08 mm – on 2 levels
- double possible insertion of the "Easy Bridge" multi-polar connection - PTC cross connection

Terminal block suitable for connecting any type of conductor for thermocouple circuits. In fact it is possible, thanks to the excellent electrical contact that results from it, **to clamp thermocouples of any type without interposing any compensation material.**
Besides the management of a single article, this solution permits the reduction of the contact points in the overall circuit.
The range of diameters of the conductors connectable, to make the connection in question fully effective and permanent, must be between 0.8 and 1.3 mm.
The thermocouple circuits, also of a different diameter, stripped of the insulating sleeve for a length of 20 mm, must be placed one on top of another in the terminal block so as to enable the direct passage of thermoelectric E.M.F. without going through a metal body, as happens in normal circuits.
With the double clamping, ensured by two screws and by the interposition of the pressure plate, the possibility of EMFs determined by the non-uniformity of the contacts is reduced almost to zero.

The bipolar BPL.4, BPL/R and tripolar TPL.4 terminal boards can be fixed separately or used to lock together terminal boards with an unlimited number of poles without using supporting rails. The special "dovetail" channels, ensuring the maximum compactness of assembly, make sufficient the use of only two screws for fixing, at the end of the terminal board. The BPL.4, BPL/R and TPL.4 terminal boards are made ready for marking with NU0550-type name tags.

(*) NOTE:
when using BPL.4 and TPL.4 terminal blocks in Ex e classified installations, the use of the insulated fixing screw is required.

MODULAR MULTI-POLE TERMINAL BLOCKS

- /PS versions have one screw connection and one flat plug feed-through shank (2.3x0.8 mm) usable also for welding
- to be fixed directly on panel, by means of screws

BEIGE VERSION		CODE TYPE	BP300 BPL.4/PS	TP200 TPL.4/PS

ACCESSORIES			
Upper end section	of beige polyamide	CF/PT	-
Insulating bushing	of beige polyamide	CF/BI	CF/BI
Reduced bushing	made of polyamide	-	CF/BR

The **CF.12/1+1** terminal boards can be mounted singularly or one on top of another. In both cases the single terminal board or the terminal board located at the top of the group must be closed with the CF/PT end platelet (thickness 4 mm). Fixing to the panel beneath can be done using:

- screws of an adequate length **(spacing between holes 69.5 mm)**
- M4 **threaded tension rods**

To ensure the maximum insulation from earth and correct mounting of the stacked terminal boards it is necessary to insert the special bushings CF/BI in the holes on the body of the bases. Bushings between the terminal board and the end platelet are not required because the latter is already opportunely shaped.

The above end platelet bears in relief the numbering from 1 to 12 for easy identification of the poles.
The connection plugs, completely protected from the outside and with opportune barriers between them, are made of a copper-zinc alloy, with a high percentage of copper, galvanic anti-rust and anti-corrosive protection in nickel or, on request, in silver (**CF.12/1+1/AG** Code CFA10).

The **CF.12/2+2** terminal boards can be mounted singularly or one on top of another. Fixing to the panel beneath can be done using:

- screws of an adequate length **(spacing between holes 69.5 mm)**
- M4 **threaded stay bolts**

To ensure the maximum insulation from earth and correct mounting of the stacked terminal boards it is necessary to insert the special **bushings CF/BI** in the holes on the body of the bases. To enable better clamping of the **CF/DD nuts**, in the case of use of threaded stay bolts, it is opportune to insert in the holes of the upper terminal board the **reduced bushings CF.BR**.

The **CF.12/2+2** terminal boards bear, on both bases, in relief, the numbering from 1 to 12 for easy identification of the poles.
The connection plugs, completely protected from the outside and with opportune barriers between them, are made of a copper-zinc alloy, with a high percentage of copper, galvanic anti-rust and anti-corrosive protection in nickel or, on request, in silver (CF.12/2+2/AG Code CFA20).

Distribution Terminal Boards

MS/8x10 DISCONNECT TERMINAL BOARD

- 8-poles, 4 ammetric and 4 voltmetric
- Insulating body: of green polycarbonate, filled with fibreglass.
- Conductor body: components of copper-zinc alloy with high percentage of copper and provided with nickel plating.
- Cover: black polyamide

QBLOK SERIES

DISTRIBUTION TERMINAL BOARDS

- Suitable for DIN rail or panel mounting
- High number of connection points
- IPXXB protection degree according to IEC60529
- Compact dimension

(1) for detals, see the installation manual

Number of pole of 1.5 mm²		12
Number of pole of 2 mm²		2
Number of pole of 1mm²		1
Rated current	(A)	80
Materials		polyamide CW 614N Brass

CONT SERIES

DOUBLE AND MULTIPLE TERMINAL BLOCKS FOR DERIVATION BOXES FROM 1.5 TO 35mm²

- CONTC Series terminal blocks are mainly used inside of junction boxes and, from a physical point of view, can be seen as simple Kirchhoff's nodes.
- Transparent polycarbonate, self-extinguishing UL94-V0
- High mechanical and shock resistance also at low temperatures (-25 °C)
- Resistance to flames and to ignition according to IEC 695-2-1
- 850 °C in the incandescent wire test
- High dimensional stability
- Excellent resistance to creeping currents
- High dielectric strength
- Excellent resistance to chemical and atmospheric agents
- CW 614N Brass
- Galvanised steel screws or grub screws

THE SPLICING SPRING CONNECTORS OFFERS MULTIPLE ADVANTAGES:

- Quick installation (without screwdriver)
- Possibility to connect different section cables
- Ergonomics and easy to connect
- Small size
- Secure and reliable cable clamping (spring preloaded in factory)
- Compatible with rigid and flexible cables
- Possibility to connect the cables individually, without the need to strand the conductors

TP END SECTIONS

For each model and section of terminal block a particular platelet for insulating and closing the open element of each terminal board is provided.
This platelet can be used also to separate different phases of terminal blocks connected in parallel or to increase the insulation distances, when required by particular situations.
The end platelets have the size of the related terminal block and thickness of 1.5 mm

TYPE	CODE	DESCRIPTION	MATERIAL	THICKNESS	
BTU	**BT005**	Universal end bracket, suitable for rails conforming to both IEC 60715, "G32" type and IEC 60715/TH35 (our types PR/DIN and PR/3); it is mounted directly in the desired position and does not require screw fixing.	in black polyamide	8 mm	
BTO	**BT007**	End bracket suitable for IEC 60715/TH35 rails (our types PR/3); it is mounted directly in the desired position and does not require screw fixing. Particularly suitable if there are rail fixing screws with high heads.	in black polyamide	8 mm	
BT/3	**BT003**	To be mounted on rails in accordance with the IEC 60715/TH35 standard (our type PR/3)	in black polyamide	8 mm	
BT/2	**BT006**	To be mounted on rails in accordance with the IEC 60715/TH15 standard (our type PR/2).	in black polyamide	8 mm	

TAG HOLDER SUPPORTS

- Universal mounting for both PR/DIN and PR/3 rails which meet IEC 60715 norms, "G32" and TH/35 types
- Made of 6.6 UL94V-0 polyamide - available in grey (RAL 7042)

PRE-ASSEMBLED CROSS CONNECTIONS

- These are supplied pre-assembled for 2-3-5-10 poles
- They allow cross connection of two or more contiguous terminal blocks and are placed in an accident prevention position with respect to the outside
- all the components are made of brass with nickedl-plating surface treatment

CROSS CONNECTIONS EASY BRIDGE SYSTEM

- Snap coupling, with no screws
- Possibility of cross and offset-pole connection
- when inserted, intrinsically IPXXB protected installation, without the aid of further insulating protections
- System covered by patent

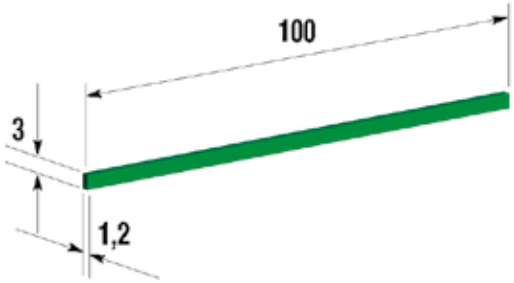
(1) Including the versions /1+2, /2+2 and/or the corresponding earth terminal blocks, if available.

After cutting the bar for the number of poles necessary, insert the cross connection in the special cavity of the terminal block.
At this point working with the tip of a screwdriver, push the cross connection up to the locking point.
The cross connection will be completely isolated and intrinsically IPXXB protected.

After inserting the cross connection, the poles connected can be highlighted with the aid of the green insert, PTC/SP.
This accessory is supplied in the standard length of 100 mm and can easily be sliced with the aid of a simple cutter.

To remove the cross connection it is sufficient to remove the PTC/SP insert, insert the tip of the screwdriver in the slot of the cross connection itself, lever it and pull it out.

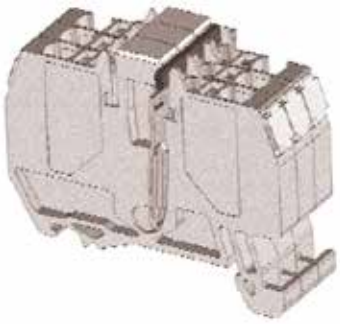
CROSS CONNECTIONS EASY BRIDGE SYSTEM

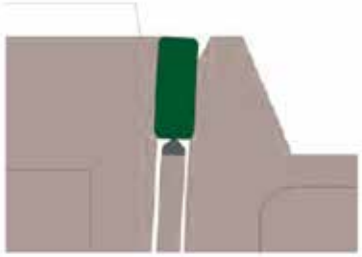


In panels with little light, seeing clearly where the cross connections are inserted is not always immediate and easy if particular attention is not paid; this can cause connection errors.
It is precisely to solve this problem that Cabur has created a marker to be used on its terminal blocks that adopt PTC cross connections, in order to make locating them easier, after insertion.

A **single model was created (PTC/SP - Cat. No. PTC0990)** common to all terminal blocks, irrespective of the pitch or the model of the PTC cross connection used. The marker must be housed in the cross-connection seat; stability on the terminal block is guaranteed by the friction on the walls of the cross-connection insertion grooves.

Note:
application of the PTC/SP marker is possible on all terminal blocks that adopt PTC cross connections (as in the list) with the exception of the HCD.1 and HMD.2N terminal blocks: in these two terminal blocks the shape of the cross-connection seat makes it impossible to obtain the friction necessary to guarantee stably the positioning and permanence. In the same way the cross connections of these two terminal blocks have a less deep introduction compared to all the others and therefore the presence of the cross connection can be seen without the need for the marker.

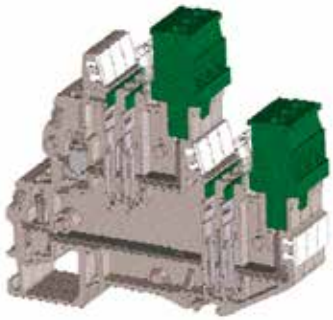


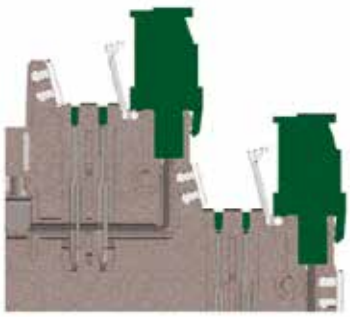


Examples of application on the HMM.2 terminal block.

The dimensions of the marker have been studied so as not to protrude from the profile of any of the terminal blocks on which it can be applied, so as not to interfere with numbering, cables or other accessories.

The marker can be applied also in the case of double cross connections. It is to be noted that the marker can be applied in the presence of other accessories, without having to be extracted in advance.





Examples of application on the VPD.2 terminal block.

The marker is produced in sticks of a length of.100 mm each and is supplied in green. Users can.autonomously reduce its length according to their needs.

The cutting operation is possible with no difficulty using a common pair of pliers, because the thickness of the sticks, made of polyamide, is only 1.20 mm.

CROSS CONNECTIONS EASY BRIDGE SYSTEM

cabur

- Snap coupling, with no screws
- Possibility of cross and offset-pole connection
- when inserted, intrinsically IPXXB protected installation, without the aid of further insulating protections
- Colours red or blue for immediate visibility of the cross connection and identification of polarity or phase
- Upper surface markable with indelible marker pen

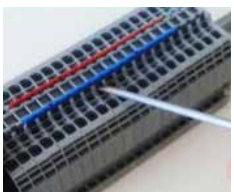
(1) Including the versions /1+2, /2+2 and/or the corresponding earth terminal blocks, if available.

After cutting the bar for the number of poles necessary, insert the cross connection in the special seat in the terminal block. With the tip of the screwdriver push the cross-connection until it comes to a stop. The cross connection will be completely insulated, intrinsically IPXXB protected and visible.

The upper surface can be marked with an indelible marker pen to indicate the presence of the pole and of the electrical connection with the underlying terminal block in cross connections with alternating poles



To remove the cross connection it is sufficient to insert the tip of the screwdriver in the slot of the cross connection itself and lever it to pull it out; with cross connections of more than 5 poles lever gradually at the centre and at the two ends until it is completely extracted

CROSS CONNECTIONS
EASY BRIDGE AND EASY BRIDGE PLUS SYSTEMS

To guarantee the correct safety conditions, after insertion and depending on the multiple connection schemes obtainable using the PTC/PTP cross connections, the table below is provided:

POF PERMANENT CROSS CONNECTIONS

They enable cross connection of two adjacent terminal blocks and are placed in an accident prevention position with respect to the outside.

The POF is made up of:
- 2 screws
- 2 sleeves (except POF/95/.., POF/150/.., POF/240/..)
- 1 plate with 2 holes

All the components are in brass, with nickel plating.

TERMINAL BLOCK	JUMPER TYPE	CODE	SCREW M X L (MM)	SLEEVE Ø X L (MM)	PLATE L X S (MM)

GPA.70 - GPA.70/FIX	**POF/70**	POF70	M5 x 35	8 x 23.5	10 x 3

(1) For terminal blocks that normally require POF connections, where they are to be inserted in "increased safety" installations (Ex e), the use of PFX cross connections is required; they include an anti-loosening washer

PMP COMMONING BARS
CPM SHUNTING SCREWS AND SLEEVES

The **PMP** commoning bar, suitable for multiple connection of several terminal blocks, whether adjacent or not, is supplied in 250 mm sections with holes adequate for the pitch of each terminal block. The bar is supported and fixed, in correspondence with each element, by a special **CPM** sleeve screw.
In use on terminal boards destined for "increased safety" (Ex e) plants the CPM screws/sleeves are fitted with self-locking washers and their part number is changed to **CPX**.

POS SWITCHABLE CROSS CONNECTIONS

If the linking of adjacent terminal blocks is occasional, a POS switchable cross connection may be used; it consists of:

- 2 screws
- 2 sleeves
- 1 linking plate with open slot, allowing easy opening and closing of the cross connection

MODULAR TEST PLUGS

The modular test plugs make it possible to carry out the final check on terminal boards already wired or a simple derivation.
The tester is positioned directly in the housing of the terminal block like a normal test plug. The extreme simplicity of the modularity makes it possible to assemble the tester in a number of poles according to the various needs.

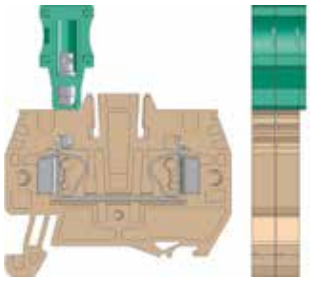
TEST PLUGS FOR SPRING-CLAMP TERMINAL BLOCKS

CODE / TYPE	DH004 SDH/4	DH005 SDH/5	DH006 SDH/6	DH007 SDH/7
DESCRIPTION	pitch 4.2 mm for terminal blocks: HMM.1, HMM.1/1+2, HMM.1/2+2, HMD.1	pitch 5.2 mm for terminal blocks HMM.2 - HMM.2/1+2 - HMM.2/2+2 - HMD.2 - HMS.2 - HP.2 Series - HP.2/P	pitch 6.2 mm for HMM.4 terminal blocks	pitch 5.2 mm for terminal blocks HMD.2N/GR, HMD.2N/X/GR, HMD.2N/X1/GR

CODE / TYPE	DH401 SH4/PT	DH501 SH5/PT	DH601 SH6/PT	DH701 SH7/PT
DESCRIPTION	closing element for SDH/4	closing element for SDH/5	closing element for SDH/6	closing element for SDH/7



SDH

PSD SOCKETS - SDD PLUGS

For measurements and checks on circuits which are related to the terminal boards,
the following special items can be supplied:

- insulated sockets (PSD) screwable onto the conductor body of the terminal blocks.
- plugs (SDD) of the bundle type, made of silver-plated brass.

COMPONENT-HOLDER CARTRIDGE

- CPF05 can be mounted on MPFA.4, DSFA.4 and HMFA.2 terminal blocks
- CPFE02 and CPFE04 can be mounted on EFS and EFDS series
- possible insertion of Ø 5 x 20 mm fuse (our type F5), with or without warning LED, diode (1 or 3 A), and other components (e.g. resistances)

(1) with fuse ø 5 x 20 mm, 250 V, Imax = 6,3 A – with brass pin Imax = 10 A
(2) the heigth depends on the mounting on relative terminal blocks and the din rail (see table)

SPECIFIC ACCESSORIES FOR TERMINAL BLOCKS

TYPE	CODE		
SCB/6/ PO/2	**SB203**	Short circuit plate for two adjacent SCB.6 terminal blocks	
SCB/6/ PO/4	**SB204**	Short circuit plate for four adjacent SCB.6 terminal blocks	
HSCB/6/ PO/2	**HB203**	Short circuit plate for two adjacent HSCB.6 terminal blocks	
HSCB/6/ PO/4	**HB204**	Short circuit plate for four adjacent HSCB.6 terminal blocks	
SCB/4/ PO/2	**SB303**	Short circuit plate for two adjacent SCB.4 terminal blocks	
SCB/4/ PO/4	**SB304**	Short circuit plate for four adjacent SCB.4 terminal blocks	
SCX/PO/2	**SC103**	Short circuit plate for two adjacent SCX.10 terminal blocks	
SCX/PO/4	**SC104**	Short circuit plate for four adjacent SCX.10 terminal blocks	
FVS/VCI	**FV107**	Screw and sleeve to perform the internal link between the front and back conducting bodies of FVS.4 terminal block	
FVS/VCE	**FV108**	Screw and sleeve to perform the internal and external link between the front and back conducting bodies of FVS.4 terminal blocks.	

TYPE	CODE		
DAS/VCI	**DS107**	Screw and sleeve for internal connection between the front conductor body and the rear one of the DAS.4	DAS/VCE	**DS108**	Screw and sleeve for internal connection between the front and rear conductor bodies and external connection between the conductor bodies of contiguous terminal blocks, for the DAS.4	CO/5	**VL103**	Ø 5 x 20 mm - in brass for terminal block types: SFO.4 - SFR.4 - SFR.6/M - FLD.10/F5 - HMF.4 - VLM.10	
SFC/CO	**FC102**	Ø 6,3 x 32 mm - in brass for terminal block types: FPC.10 - SFC.10 - SFR.6 - with possible derivation by means of plug SDD/2	
CBD/SH	**CB009**	For the connection of the cable shielding - to be used on terminal blocks type CBD.2, 4, 6, 10.	
SCB/6/ CPM	**SB205**	Sleeve to be used with SCB/6/ PO link	
HSCB.6/ CPM	**HB205**	Sleeve to be used with HSCB/6/ PO link	
SCB/4/ CPM	**SB305**	Sleeve to be used with SCB/4/ PO link	
SCX/CPM	**SC105**	Sleeve to be used with SCX/PO link (*)	

(*) they are supplied mounted as in A. It is necessary to remove, as in pos. B, the one to introduce into the platelet slot, put it back and screw it onto the body of the terminal block.

F5 FUSES

According to the IEC 60127-2-1- standard with rapid burn-out for voltage 250 V. In small steatite tube filled with spark-quenching powder (interruption power 1500 A).

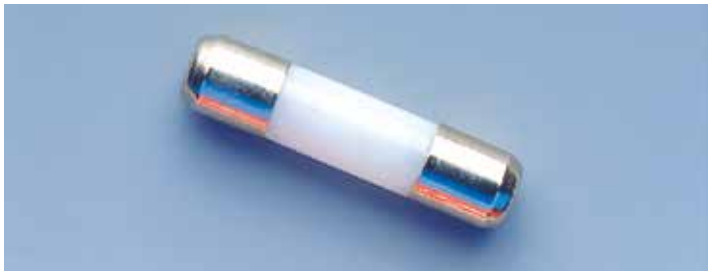
LSN TORPEDO PILOT BULBS F5 FUSES

CODE	TECHNICAL CHARACTERISTIC
FL201	Festoon light bulb Ø 6 x 26 mm, with stabiliser resistance incorporated, for voltage between 12 V AC and 48 V AC, for use on FLD.10/F5L, FLD.10/F6, FPL.10 terminal blocks.
FL202	Festoon light bulb Ø 6 x 26 mm, with stabiliser resistance incorporated, for voltage between 70 V AC and 380 V AC, for use on FLD.10/F5L, FLD.10/F6, FPL.10 terminal blocks.
KIT1224	For SFR.6 and SFR.6/M terminal blocks.
KIT70380	For SFR.6 and SFR.6/M terminal blocks.

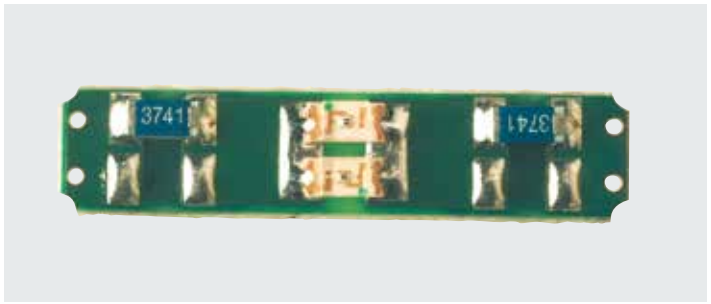


CIL SIGNAL CIRCUIT

For signalling the status of fuse-holder terminal blocks types SFR.4 - DSF.4 - FPL.10/C - HFR.4. Suitable for use in circuits powered both in D.C. and A.C.
Each packet is supplied with:
- two contact blades
- one nonpolarized LED microcircuit
- one transparent protection.

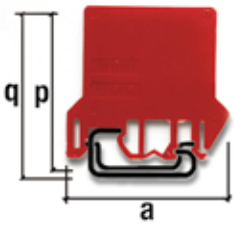
The components are inserted inside the terminal block in this sequence

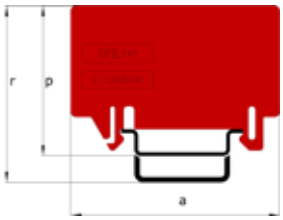
TYPE	CODE	RATED VOLTAGE [V DC - V AC]	CURRENT L R.M.S. [A] (*)
CIL/12-48	**SF518**	12-48	3.0 mA
CIL/115-230	**SF510**	115-230	2.3 mA
CIL/12-48	**HF518**	12-48	3.0 mA
CIL/115-230	**HF510**	115-230	2.3 mA



DFU-DFH-DFP PARTITIONS

Made of red polyamide, thickness 1.5 mm, to be placed to separate the elements on the terminal board to enable easy identification of certain circuits or to increase the insulation distances between the terminal blocks. The partitions can also be used to increase the insulation distances between adjacent cross connections or multiple parallel platelets.





NOTE
(1) q dimension can be obtained by adding 4 mm to dimension p
(2) r dimension can be obtained by adding 7.5 mm to dimension p

PRT COVERS / SPS SUPPORTS

For protecting from accidental contacts or tampering CDA and ACB Series terminal blocks.
Made of self-extinguishing and transparent material of thickness 2.3 mm and fixed length 200 mm (corresponding to the total width of the four terminal blocks side-by-side).

The covers are available in three sizes:

- **PRT/P** 22 x 125 mm (Cat.No. PRT01)
  for protecting ACB/BB terminal blocks
- **PRT/M 50** 50 x 125 mm (Cat.No. PRT02)
  for protecting ACB/CC terminal blocks
- **PRT/G 85** 85 x 125 mm (Cat.No. PRT03)
  to be used when the conductors come from the backboard, or in order to protect a connection point not yet connected.

The PRT covers must be inserted on SPS supports, made of self-extinguishing ABS / class UL94V-0, thickness 5 mm, interposed between contiguous terminal blocks. Protection of the four terminal blocks side-by-side is achieved by means of overlapping coupling of two PRTs.

Note:
The ID Cat. No. (i.e. PRT01) is referred to a single item.

(*) height including rail

PZM PROTECTION COVERS AND PZD SUPPORTS

PZM.4 COVER

(a = 64+2 mm / b = 32 mm)

Cat. No. **PZ330**

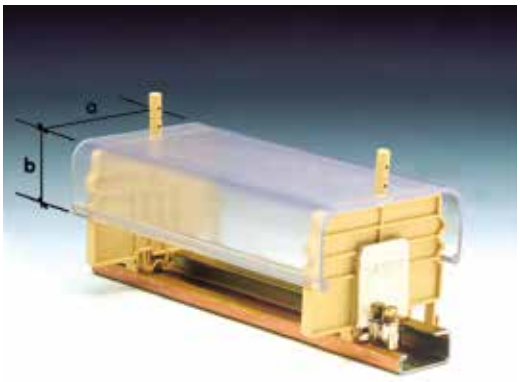
For terminal blocks **of size up to approximately 58 mm** (including rail).

To be mounted with **PZD.4/SO supports** (Cat. No. PZ331)

Maximum size PZM.4 + PZD.4/SO

- on rail IEC 60715/G32 = 70 or 82 mm (*)
- on rail IEC 60715/TH35 = 65 or 77 mm (*)

(*) depending on the notches used, upper or lower.



PZM.4 - PZM.6 channel

PZM.6 COVER

(a = 85+2 mm / b = 36 mm)

Cat. No. **PZ110**

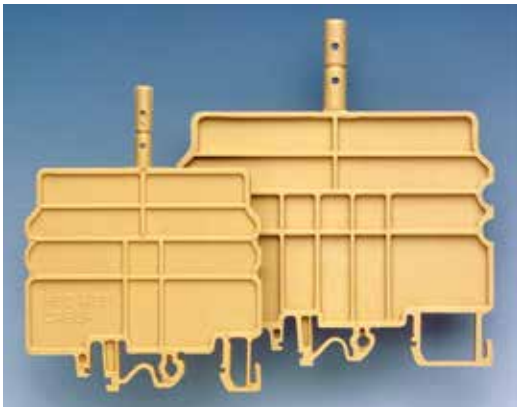
For terminal blocks **of size of more than approximately 58 mm** (including rail).

To be mounted with **PZD.6/SO support**s (Cat. No. PZ112)

Maximum size PZM.6 + PZD.6/SO

- on rail IEC 60715/G32 = 82 or 94 mm (*)
- on rail IEC 60715/TH35 = 78 or 90 mm (*)

(*) depending on the notches used, upper or lower.

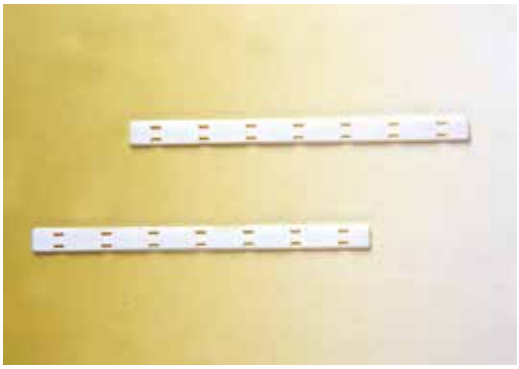


PZD.4/SO - PZD.6/SO supports

Made of **PVC** for protecting from accidental contacts or tampering terminal blocks up to a section of 70 mm^2.
They are supplied in 2 m lengths and are to be mounted on specific polyamide supports, insertable on PR/DIN and PR/3 support rails, types "G32" and TH/35.
They can be made unmovable with sealing of the support appendices.

PRP PROTECTIONS

The cross connection, made up of the PMP multiple commoning bar and CPM screws and sleeves, already located in a position further back with respect to the front of the terminal board, can be further protected against accidental contacts, by means of a U-shaped cover, made of polyamide, with a standard length of 10 cm. The above protection, which is white, can also be used to write words or make reference markings of the terminal board. Special slots are provided on the protection to make it easy to remove using a screwdriver.



PRP Protections

for terminal blocks of cross section 2.5-4 mm^2	**PRP/6**	Cat. No. **PRP06**
for terminal blocks of cross section 4-16 mm^2	**PRP/7**	Cat. No. **PRP07**
for terminal blocks of cross section 25-70 mm^2	**PRP/8**	Cat. No. **PRP08**
for TLD.2-TLS.2-CBR.2-DAS.4-TLE.2-TDE.2 terminal blocks	**PRP/5 (red, blue, white)**	Cat. No. **PRP05**

TQM-TTM-TUM-PRP/7/G WARNING PLATES

Made of self-extinguishing material, capable of guarantee the maximum safety of work on terminal boards connected to circuits that are always live. Bearing warning signals and notices, fixable to the terminal blocks by means of two nylon insulating screws, they are available in models of different sizes, according to the type of terminal block. The cover can be tripolar or quadripolar; in some cases the tripolar is made removing a pre-cut part of the quadripolar cover For CBC. 2-4-6-10 terminal blocks the PRP/7/G is supplied;
this is without screws, to be inserted in the channels of the cross connections.

TAI

Possible danger status may be marked using **special triangular self-adhesive labels**

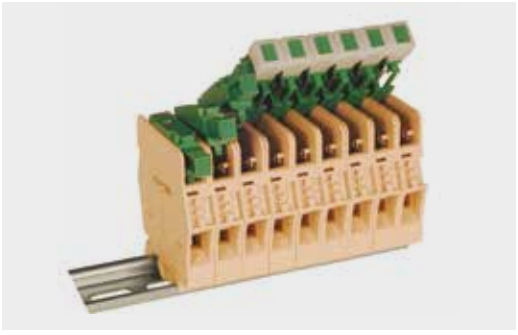
TAI/6 (Cat. No. TA001)
TAI/12 (Cat. No. TA002)

to be applied on the protection covers and channels.

MSM HANDLE

For simultaneous switching of several FPL.10 and SFL.10 terminal blocks side-by-side.
Supplied in strips of 6 elements.

MSM (Cat. No. FC103)



TAG HOLDER

- Possibility of marking 2- and 3-level terminal blocks
- High visibility of the marking
- Available in the 2- and 3-tag version
- Reduced vertical size thanks to high flexibility
- Compatible with all the 2- and 3-level terminal blocks
- Available in grey

Terminals with sleeves and insulated collars
Series: WP

The double slot series is made of tin-plated electrolytic copper with the insulated part in polypropylene, resistant up to 105°C.
These terminals were designed for use in connections where a quick and safe connection is required. In fact, the current trend towards miniaturisation of electrical equipment makes these terminals particularly useful and economical.
The special large housing slot is easily able to hold the bulk created by two wires.

Industrial Marking System (extract from full catalogue)

SMARTPRINT SYSTEM

The new printer SmartPrint Plus with thermal transfer technology is Cabur's answer to the many different needs in the world of industrial marking. Ideal for identifying terminal blocks, cables and electrical components. It is characterized by an attractive and functional design that makes immediate, simple and intuitive use and it is lighter and more manageable thanks to a new ultra-resistant ABS thermoplastic polymer shell.
Reliable, versatile, precise and fast SmartPint Plus allows to create high resolution prints for excellent quality and long-lasting markings.
With SmartPrint Plus you can print up to 100 tags in 6 seconds, identify terminal blocks made by Cabur and other manufacturers, single cables or bundles, buttons, electrical components and carry out the complete marking of the outside panel. Ribbons are the longest on the market, with a highly competitive price. The installation of the MarKing Pro XT software and the SmartPrint Plus printer on WINDOWS systems starting from WIN7 up to WIN10 is quick and easy and in seconds the printer will be ready for use.
The Multi-Page printing function allows to manage the printer directly by the buttons onboard the machine and allows easier and more practical use without having a PC nearby; the new multi-plate function allows to launch all the prints from pc at once and manage them directly from the printer, making the printing process faster and easier.
Equipped with a display and two control keys, SmartPrint enables the printing of alphanumeric texts, logos and graphic symbols on numerous marking media:

- sleeve tags to identify wires
- adhesive cable marking labels
- tags for terminal blocks
- tags for push-buttons
- tags for contactors/PLCs;
- modular strips for electrical distribution panels
- panel identification tags.

TECHNICAL DATA	
Code	SMARTPRINTPLUS
Dimensions (DxLxH)	250 x 250 x 380 mm
Weight	9,5 kg
Display	LCD
Interface	USB 2.0
Resolution	300x600 dpi
Print Speed	19 mm/seconds
Windows support	Microsoft® Windows™ 7 o later
Power supply voltage	100-240Vac 50-60Hz
Current	1,5 A
Working temperature	+5°C +40°C
Print area	105 mm x 140 mm
Ribbon	high strength resin
Ribbon colours	Black, Blue, Red, Green, White

THE PACKAGE INCLUDES
1 SmartPrint Plus printer
1 USB cable
1 Power cable
1 Power supply
1 Ribbon code RSP300BK
1 MarKing Pro XT Software, complete with user manual in electronic format
1 Plate Kit made up of • • 1 PLT06 support plate for cable tags code NUT12S/NUT18S; • 1 PLT01 support plate for FLAT series tags code NUT FL-TAP-TAV-TAM - TMM - SIM

Code: SMARTROLL - Marking: SMARTROLL

The SmartRoll thermal transfer printer is simple to use and guarantees rapid production of perfectly defined labels.
Resistant, reliable and without the need for particular maintenance, SmartRoll is designed for high print volumes and is suited to any working environment.
Precise in all details, it guarantees the lowest noise levels during use.
Fitted with a display for controls and an acoustic signal, it is the ideal solution for continual and fast printing on:

- sleeve tags to identify wires
- adhesive cable-marking labels
- tags for contactors;
- **MarKing Pro XT** management software

SmartRoll is also equipped with a LAN / WLAN network port to be shared online and used with different computer

TECHNICAL DATA	
Technology for	thermal transfer
Interface	USB 2.0
Resolution	300 dpi
Print Speed	Up to 152 mm/sec
Windows support	Microsoft® Windows™ 7 or later
Dimensions (DxLxH)	505 x 270 x 308 mm
Weight	approx. 15 Kg.
Power supply voltage	100 - 240 VAC
Working temperature	5-40°C
Ribbon	monochromatic resin based
Ribbon colours	Black, Red

THE PACKAGE INCLUDES:
1 SmartRoll printer
1 USB cable
1 Power cable
1 MarKing Pro XT Software, complete with user manual in electronic format
1 Ribbon code RSR300BK

Code: CABURJET - ID code: CABURJET

The CaburJet inkjet printer has a smaller size to reduce bulk and offers an innovative design, aimed at making it fast and easy to use, with no maintenance problems.
It's the ideal solution for continuous, automatic, and fast printing of:

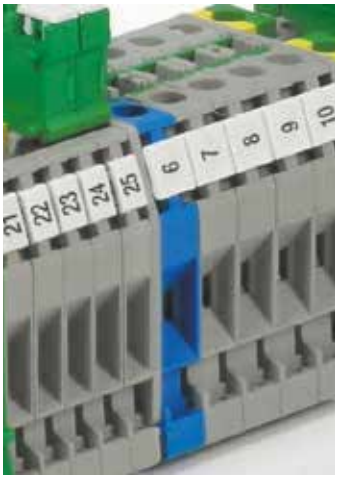
- sleeve tags to identify wires
- tags for terminal blocks;
- tags for push-buttons;
- tags for contactors;
- modular strips for electrical distribution panels
- panel identification tags.
- **MarKing Pro** management software

This is a highly innovative solution, created to meet multiple needs **in the industrial field**, at a competitive price.
The printer has an automatic integrated feeder (SEPARATOR), which accepts all of the above mentioned products - even mixed. It is also possible to print on individual stems by simply placing them at the bottom of the feeder like a normal sheet of paper.
The feeder can hold 50 cards for a total of 3,000 NUT12 series tags (tags for 12 mm long sleeves).
After just an hour of printing, 24,000 tags are ready for use. The material used (self-extinguishing polycarbonate) for production of the cards, together with the ink, means that the card can be used almost immediately after printing, and is indelible in accordance with CEI 16-7.

TECHNICAL DATA	
Print technology	monochromatic inkjet printing
Interface	USB 2.0
Resolution	360 Dpi
Ink	refillable bottles
Print Speed	24,000 tags per hour
Windows support	for PC systems with Windows 98 SP2 and later
Dimensions (LxWxH)	330 x 370 x 220 mm
Weight	approx. 12 Kg.
Electricity consumption	during printing, 24W max. with compressor on, 35W
Power supply voltage	115-230V

THE PACKAGE INCLUDES:
1 CaburJet printer
1 USB cable
1 Power cable
2 80 ml bottle of ink
1 250 ml bottle of cleaner
1 copy of MarKing Pro software; including a licence for 5 installations, and a digital user manual

CNU/8/51 for HORIZONTAL and VERTICAL printing



- Marking tags suitable for marking all types of terminal blocks (screw-tightening and spring-clamp) in tables of 100 elements in packs of 500 tags
- In white polycarbonate with black printing, to be applied directly into position either before or after preparing the rail assembly.
- **Tag dimensions: 8 x 5.1 mm. Pitch on CBC.2 and HMM.2/GR.**
- **Mounting of single tag on all Cabur terminal blocks.**

Special numbering for terminal block marking

Cabur can supply, on request, special marking tags with numbers, letters, symbols and customised logos in packs of 500 tags, printed using the CaburJet System.

Request special marking by specifying the following on the order:

A - Item code, selected from those found in the table (e.g. NU0851SP)
B - Number of tags ordered (min. 500 pcs. / 1 pk.)
C - Writing type (horizontal or vertical)
D - Content (text, numbers, symbols) to be printed on the tags (e.g. A1B)

To optimise the service, as an alternative or in addition to that required at points c) and d), we recommend sending Cabur a MarKing Pro file created with the specific requirements of the order.

For example, by ordering:
Code: NU0851SP
Quantity: 1000
Writing type: horizontal
Content: ABC

You will receive 2 packs of 500 tags each of CNU/8/51, personalised as requested.

Special numbering for wire marking

Cabur can supply, on request, special marking tags for wires, with numbers, letters, symbols and customised logos in packs of 500 tags, printed using the CaburJet System.

Request special numberings for wire marking, by specifying the following on the order:

A - Item code, selected from those found in the table (e.g. NUT15SP)
B - Number of tags ordered (min. 500 pcs. / 1 pk.)
C - Content (text, numbers, symbols) to be printed on the tags (e.g. A1B)

To optimise the service, as an alternative to or in addition to that required at point c), we recommend sending Cabur a MarKing Pro file created with the specific requirements of the order.

For example, by ordering:
Code: NUT15SP
Quantity: 1500
Content: ABC

An order will be placed for 3 packs of 500 tabs each of NUT15, customised as requested.
